A set of several farm rakes with long handles and metal-like end caps. These are a part of my current work on farmstead scatter props, and can be used along with my other designs in this series to quickly print and populate a tabletop game.

I designed these for a D&D game I'm running, and optimized them to be printed on an FDM printer, with a 0.4mm nozzle and with minimal support. Once printed, you can clean off the support with a sharp knife, and you'll be ready to prime/paint! The thickness of the handle is made so that they'll fit great into a mini's hands if you want to use them that way.

All of these are designed for 2mm scale. The default scale should be perfect for this, but you can scale up/down in your slicing software anywhere from 80% - 120% and they'll still look scale-appropriate.

I may create more variations and add them over time - so be sure to keep an eye on this page for more models!

As always, I'd love to see how you all print these and use them in your games. Please add makes/pictures so others can get some ideas for how to use them!

Print Settings

Printer Brand:

Prusa

Printer:

i3 MK2S

Rafts:

No

Supports:

Yes

Resolution:

0.4mm

Infill:

15%

Filament:

Overture PLA Space Grey

Notes:

Printed on the Prusa Mini, on a flat coated spring-steel bed. Additional details:

Layer Height: 0.05mm

Bed Temp: 60

Perimeters: 3

Supports: Only on bed

Post-Printing

Support Cleanup

I suggest taking a sharp craft knife, and carefully removing the supports. You can then use the blade to clean the back-edges of the rake's prongs by gently following the prong up to the shaft, and then remove the excess PLA.
