I always had adhesion problems printing dummy in original scale. 1-2 parts fell off randomly and i had to reprint them. Once my son asked to print dummies for his friends, I found that i missed such model. So here it is.

This model contains 2 files, **male and female** version.

Each file contains 3 plates - **frame, armour, hands.**

Goal of this model is:

- Solve adhesion problems. Parts should stay in place util end of print;
- Minimise parts placement. (150% scaled original runner won't fit on my mini printer);
- Optimise parts placement. You can print 2 runners on one plate, even scaled. 4x times less plate space required;
- Minimise waste of plastic;

- Runners has different left and right hands;
- Add extra hands, weapons (TBD);
- Make runner easy detachable.

Please, check my dummy stuff:

Dummy 13 in 500% scale, stronger joints, Dummy 13 Case
