Variation on Spiral Fidget

Christmas Light Bulb

This is not as simple a design to print as it might seem. Start printing **LampExt.stl** first, usually problems arise with this file, the part breaks in the base area. It seems to me that this is due to the plastic itself and or printing settings.

...and of course read the comments, there are useful tips and links

You can try using a test file with support **LampExt v4test.stl**, and also if there are printing problems, try 0% infill (2 walls)

LampExt.stl, LampInt.stl - I used a raft, to increase the contact spot.
LampInt.stl - enable **“**avoid crossing perimeters”

Don't forget to give me a like
