EDIT #2

As a surprise for today's Halloween celebration, I've prepared a new character for you - a zombie skeleton. Enjoy!

EDIT #1

Some of you had issues with the lid. Although there were problems in both directions—either too loose or too tight—the main issue was that it was too tight. I've prepared a new STL file for a looser-fitting lid with longer rim (what was another note feedback). I'm sorry for the trouble this has caused and hope this will help fix it.

Brick system inspired containers in three designs - a pumpkin, a skeleton, and a frightened man. Each consists of a bottom container and a lid.

Each of the three variants consists of two parts – a lid and a bowl. I tried to save material by using supports and printing in multiple parts. Specifically, two pieces for the lid and two pieces for the bowl, with joints that didn't require gluing, just snapping into place in a groove. However, the print didn't have such clean inner surfaces, and it took longer. In the end, I decided on this version with fewer parts but more filament (supports).

They can be used either as candy containers or as simple lamps if you place an electric tea light inside.
