Summary

A cozy pillow to let you phone charge in comfort

[Gadgets](#) > [Other Gadgets](#)

Tags: [holder](#) [phonestand](#) [phone](#) [dock](#) [charging](#) [pillow](#)

This pillow phone stand has been designed to replicate the effect of an object falling onto a pillow and I have added all the relevant creases and distortions to make it both realistic and highly functional for all phone sizes. I have also added a hole to put your charger through, this hole is purposefully large to ensure all size charging cables fit.

My iPhone fits perfectly and has a width of 8cm. If your phone is bigger or smaller simply scale the model up or down accordingly.

Print settings:

- 10% infill
- 2 perimeters/walls
- 0.2mm layer height
- 100mm/s speed

Note: This model was inspired by [The Phone Pillow](#) however it is not a remix because it was fully designed by me from scratch in Blender, I

have also made some improvements on the original, like adding a spot for your charger lowering the print time with a more compact model.
