Display case and stand for [Raspberry Pi Touch Display 2](#) and [Raspberry Pi 5](#)

I have not tested with a Raspberry Pi 4 - it might need some tweaks so if this design is popular I'll do one that fits a Raspberry Pi 4.

Easy to assemble - just use the screws that came with the display.

I printed on the back face with supports on the bridges. I thought that would require the least support. I could have avoided supports by designing differently but I was keen to keep the shell as a single piece.

If anyone has any better suggestions about how to print, please share. And if you make this, please share photos. I love to think that other people are using my design.

Update - New body with more vents to keep your Pi cooler
If you like this design please [buy me a coffee](#)
