Desktop Skee Ball v1.1 - What's New?

- A Y Chute Guide [D3] has been added to the parts list for easier alignment of the Y Chute during assembly.
- Funnel and Funnel Support Bracket have been replaced as a single part, now called Funnel Assembly [D4].

You do not need to print the new version of the Funnel model if you already printed the old version, as both are compatible with existing parts. The assembly guide has been updated (v1.1) for the new models. The older versions have been moved to the 'Archive' folder if you require them in the future.

Start your very own mini arcade at home! Desktop Skee Ball is designed to be a mini version of the classic arcade game, while retaining most of the design resemblance of the original as much as possible.

Complete with a full length ramp, automatic gravity-fed ball return, and target holes that closely resemble the beloved classic game, this model is sure to bring endless hours of fun and competitiveness between you and your friends!

This model has been designed to be simple to print with very little support material required. It has also been designed to be simple to assemble with minimal tools required and includes a complete assembly instruction manual with images to help you every step of the way.

The download files include most of the parts necessary to build the unit. Some additional hardware and tools are required and are outlined in the assembly instructions which is included as a PDF document.

Have fun, and happy printing! :)
