I couldn't find a shelf for Skadis that could be printed in one part and that fit on the Prusa Mini build plate. Inspired heavily by [Ikea Skadis Shelf by xyren](#), I made one.

The shelf uses 4 peg holes and more can be mounted next to each other to create a longer shelf. I have made one with 65mm depth and one with 100mm depth.

Update 08.04.22

I have added an updated version of the 100mm shelf. I had a few issues where stuff kept falling off the shelves, so the updated version has a bit tighter fit in the hook to keep it from drooping slightly. I also thought about adding a lip, but that would complicate the print somewhat, so instead I added a slight upwards slope on the shelf as well (0,5 degrees).

The four braces underneath was probably a bit overkill as well, so I removed two of them to save some plastic.
