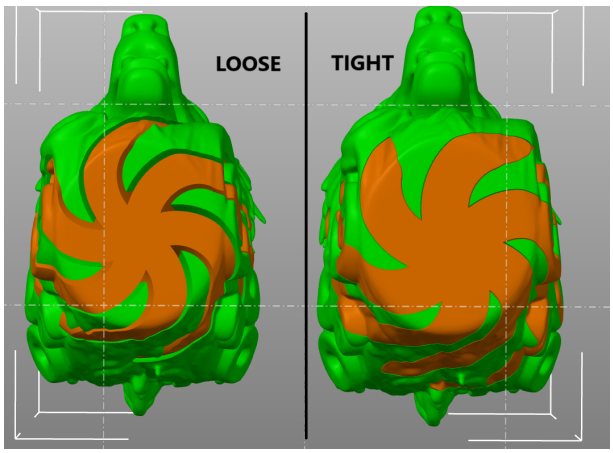
Update 30.1.2025 - Tight version

This updated version includes a reduced gap between the inner and outer parts to 0.2 mm. The larger gap ensures a smooth passthrough, but can cause the inner part to wobble due to looseness. To address this, two new models have been added to the folder, with the reduced gap of 0.2 mm, which demands higher precision from the printer. Note that the "tight" and "loose" parts cannot be mixed together.



Wolf - Passthrough Bust

Elevate your home décor with my latest 3D model—a stunning wolf bust with bared teeth. Inspired by the original design by 29flo, this model has been enhanced with a unique passthrough effect, creating a striking two-tone look. The passthrough also makes it an excellent fidget toy for stress relief.

Printing Instructions:

- **Recommended Material:** PLA or PETG
- **Layer Height:** 0.15 mm
- **Infill:** 20%
- **Supports Needed:** Yes (a lot)

Printing this model can be a bit challenging due to its irregular shape, so it requires supports and not all prints may succeed. However, the result is definitely worth it.

Why Choose This Model:

- **Decoration:** Perfect for adding a touch of wild elegance to any interior.
- **Creativity:** The passthrough effect gives the model a unique and eye-catching appearance.
- **Multifunctionality:** It can also serve as a fidget toy.

I hope you enjoy my version and give it a like. Follow me for more amazing 3D models. Your support motivates me to create even more innovative pieces!
