Summary

I was trying to use some printed 18650 spacers, but they were not optimal.

Tags: [battery](#) [18650](#)

I attempted to use some 3D-printed 18650 spacers, but they weren't ideal. The injection-molded design you can get from [aliexpress](#) has two identical tabs on each side, which makes the other printed alternatives weaker. This updated module features:

- Larger, alternating tabs
- A looser battery fit
- A perfect fit for nickel metal grids

Note: Print two pieces and test the fit. Be sure to check the comments—some users report a perfect fit, while others find it too loose. Resize for perfect fit and share your experience.
