An N-scale version of the HO-scale distribution center crafted by Kabrumbler. I started designing it shortly after Kabrumbler posted his file many months ago, then forgot all about it until another modeller ([jeff_j3ffr3y](#)) posted their N-scale version of the same building: <https://www.thingiverse.com/thing:3973960> So, I figured it's time to publish mine to

The main building should print fine as one piece. My printer was able to handle the span of the open garage door without supports. I did let Cura generate supports for where the garage door's lower sills are. The roof/floor braces are printed with the triangle below it to avoid the need for supports.

The Floor/roof files are intended as templates for measuring a piece out of sheet styrene or foam board. Of course, you could print them if you wanted.
