Summary

A 100% print in place model of the iconic Dummy 13 that requires no assembly whatsoever

The **Dummy 13** by SoozaFone is, in my opinion, one of the most brilliantly designed models ever. Its immense popularity speaks for itself—achieving an astonishing **2,000 downloads on its first day!**

I absolutely love the Dummy 13, but I wanted to take it a step further by creating a **fully print-in-place version**. This redesign retains the **exact same joint layout** as the original but prints **all in one go, requiring no assembly whatsoever**. It can be fully compatible with all Dummy 13 hands, allowing for easy customization, and also features a cutout in the back designed to fit the Dummy 13 stands. ([Download hands here!](#))

Print Settings:

- **Layer Height:** 0.2mm (for best detail and smooth movement)
- **Infill:** 15-20% (higher for durability)
- **Supports:** None required

- **Bed Adhesion:** Brim or skirt or raft (optional, depending on your printer)
- **Material:** PLA, PETG, or ABS (PLA recommended for easy printing)
- **Print Time:** Under 1 hour (varies by printer speed)

Important Notes:

Since this model is print-in-place, there is a **0.4mm clearance between ball joints and casings**. While this ensures smooth articulation, it means the figure won't hold poses as firmly as the original Dummy 13.

This model is **quick, easy to print, and fun to pose**—a fantastic addition to any 3D printing collection!

Updates:

18/02/2025 - I have added a compatible version to help this work with the Dummy 13 accessories

23/02/2025 - I adjusted the neck joint to ensure it doesn't detach

This remix is based on

Dummy 13 - version 1.0!
