updated 11. 3. 2025 | published 11. 3. 2025

## Summary

A wrench for easily removing the caps from soda bottles. Fits 20 oz and 2-liter bottles (at least in North America)

Household > Kitchen

Tags: bottle tool accessibility bottlecap

Introducing “The Lamprey”, a soda-bottle-cap-opening wrench!
Originally made as an accessibility aid for people with arthritis or other grip issues.
The design affords three hand positions - right up by the cap, in the middle of the handle, and out at the end of the handle.
All of the prototypes I've printed have been done in PLA, and so far none have broken, but your mileage may vary. PETG might be a better option for longevity, but the softer material may not “bite” into the cap as well as PLA.
*** Updates ***
Left-handed version has been uploaded! Even if you aren't left-handed, this might actually be the better version, as the “pull” action is typically more-natural and stronger than a “push” action.
