A collection of all the modular lightsaber parts from my first five build your own lightsaber models including parts from Obi-Wan Kenobi's, Qui-Gon Jinn's, and Luke Skywalker's V2 Lightsabers along with parts from three custom sabers and parts inspired by Ezra Bridger's 2nd and 3rd sabers and Cal Kestis/Jaro Tapal's saber. With over fifty different parts and an infinite number of unique combinations this is the ultimate customizable lightsaber kit.

Just grab a pommel an emitter and however many parts in-between as you like then screw them together. The parts in the folders are pieces with

multiple parts to them for more detail and multi-colored printing, you will see how they fit together in the pictures. No glue is needed. Please let me know if you have any questions, problems, or ways to improve the model. Enjoy!
