This compact and efficient cleaning nozzle (drain jetting nozzle) is designed for use with standard Gardena connectors. Perfect for cleaning gutters, channels and narrow drains.

Fair word of warning: don't plug on a hose and turn on the water, insert it in the gutter/drain first or you will get wet
though the shape might look tempting: just don't :)

Features:

- **1 forward-facing jet** for targeted cleaning
- **5 rear-facing jets** for propulsion and flushing debris
- **Low-profile design** to fit into tight spaces
- **Inner ribs** for increased strength
- **Integrated CAD-modeled support** ensures perfect geometry for the O-ring sealing groove
- **Parametric** .f3d source file included

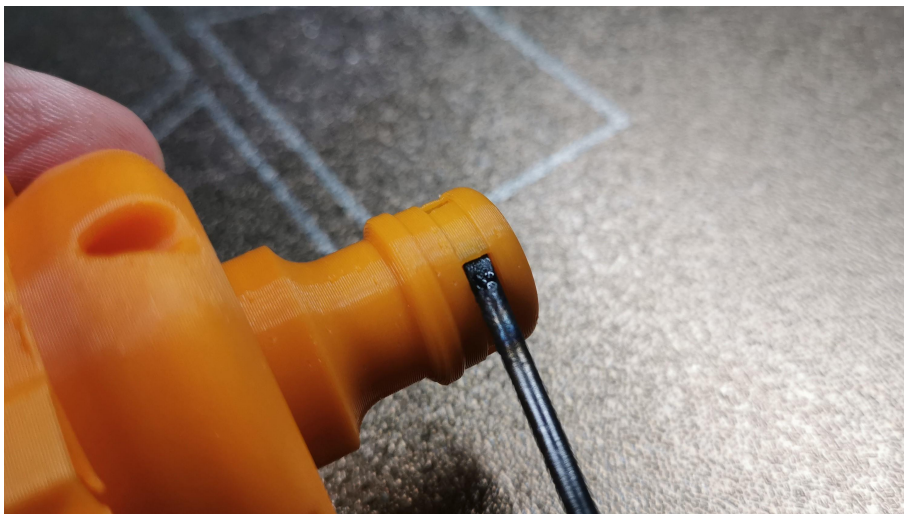

Printing:

- **Print orientation:** Upright
- **Walls:** 3 with concentric top/bottom
- **Infill:** 5 to 10 % gyroid
- **Supports:** Normal supports with Honeycomb pattern up to 75° threshold with increased interface spacing

Assembly & post-processing:

- Break the Part free from the support scaffold
- After printing, use a flathead screwdriver to break out the supports from the O-ring channel.
- Insert a standard garden **O-ring** into the sealing groove.
- Done – ready for action!
