This is an adapter that fits onto the standoffs on an E5 pixie enclosure box, and allow snap-in mounting of a Fysetc Spider board. It has cable guides:

- e.g. endstops and such can be run on the left side below the guide
- power in and bed and heater outputs have a guide in front and can be fixed by using a small (3 mm wide, 1 mm thick) cable tie
- Stepper driver cables can be wired on the right side under the guide there
- There are two additional slots on the right to run cables to and from the Pi Zero 2W (and potentially other auxiliaries)
