This is the Playstation Pi Tiny V6.

- Improved version of the V5:
- lot easier to put together.
- easier to print.
- optimized for fdm printing

And the lid/top still comes off, to reveal the GPIO pins and other stuff, for your projects, or for just easy acces to the raspberry pi, without use of any tools.

This is a Raspberry Pi case, designed to work with the pi 2 and 3 , it is designed look like the Playstation 1.

- There are 2 different types of mounting the Pi, one that have holes for screws, and another with studs so the raspberry pi can be mounted with out any tools,
- There are also 2 types of frames, both with a different version of mounting the pi with, as mentioned above, but one is with the bottom combined to the frame, and the other with the frame and bottom separate from each other.

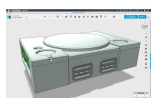

The intention with this case is being used for emulating old games on ReTroPie, but for those who rather want one the at looks like the playstation.

- i made this new version of the playstation pi tiny, since the YouTuber "LGR" used another 3d file for his video, so i decided to make this version more appealing to those who wanted to make one, but in a more printing friendly way (and that i got sad, that LGR said that the design he used, was appealed more to him, then most other 3d printed ps1 cases he could find online, and this broke my little nerdy heart :(.... aaah im just joking with you guys :P but the video did make me want to make a better version of the playstation pi tiny

if there are any problems, please let me know.

(i do not claim to own or anything similar, aboutany designs, names or any of Sony Group Corporation. intellectual properties , all copyrights belongs to Sony Group Corporation.)
