[retropie](#) [raspberrypi3](#) [playstation1](#)

This is a Raspberry Pi case, designed to work with the pi 2 and 3, it is designed look like a mini version of the Playstation 1.

.

The intention with this case is being used for emulating old games on ReTroPie, but for those who rather want one that looks like the playstation

.

This is still version 1 and it might have some flaws when it comes 2 usability (please comment or contact me if any problems with the design need to be changed or optimized)

the size of the holes are 2,5mm wide (D=2.5mm) and i would suggest using a screw made for either plastic or wood for this project.

This version of the playstation pi tiny is fully compatible with the v2.

(this project is finished, but will still be receiving updates)

(i do not claim to own or anything similar, about any designs, names or any of Sony Group Corporation. intellectual properties , all copyrights belongs to Sony Group Corporation.)
