Had these Mason Jar Lamps and when found out about making Lithophanes with a 3D Printer knew had to make some. These are the first two have designed and wanted to make more so added a STL file so could easily create new ones without recreating the Mason Jar. Added instructions how to make your own that will fit the Jar and how to do it.

The two have made have the pictures spread out so can change them periodically for a different view.

When printing this thin it isn't very forgiving so there is a slight thinning above the lithophane in one section. Not sure how to address without possibly making it thicker and don't really want to do that. If a Blender expert knows how let me know. Also each lamp came out slight different white even though the same spool. Not sure why, but since have the Base Mason Jar Shade model locked in now hopefully subsequent ones will look more similar.

## Model files

### base-mason-jar-lithophane-shade.stl

📄 Base Jar Shade to add your own Lithophane.

---

### masonjarlamp-half-life.3mf

📄 Jar Lamp Shade with Half-Life Theme. ~22:36 to print

---

### masonjarlamp-portal.3mf

📄 Jar Lamp Shade with Portal Theme. ~20:33 to print

---
