## Summary

The easiest way to keep dust collection ducting where you want it is with a magnetic bracket!

[ducting](#) [magneetic](#)

This is a simple, easy to print bracket with 6x8 magnets which fit my magnetic dust collection ends perfectly. Just press fit as many magnets as you wish. The magnets are always placed from the opposite side of a half millimetre skin, so there's no chance of them staying behind when you move the object, nor of them coming unstuck when you least expect it.

You'll find those and many more things in my [Dust Collection COLLECTION!](#)
