

Shop Light from LED Work Lights

[VIEW IN BROWSER](#)

updated 8. 2. 2022 | published 8. 2. 2022

Summary

Turn an old tripod into a proper shop light using inexpensive LED work lights.

[Gadgets](#) > [Photo & Video](#)

I have been using this light for a few years now. It works well for photography and video needs and a work light.

I purchased the least expensive **LED lights** I could find. You also need three 1/2" diameter wood dowel rods from your local hardware store. I ended up drilling holes and using zip ties to hold the lights to the three corner pieces.
