## Summary

I made this model to hold curtain rod on the top on a famous swedish bookcase

[Household](#) > [Home Decor](#)

Tags: [ikeahack](#)

all the weigh of the curtain will be borne by the bookcase. this piece is just he to prevent to drill any hole in a wall.

this is designed for a 25mm rod.

as I trust my MK3, I have printed it without support (cf photos) . but depending of your own printer I do not recommend it.
