Summary

2 boxes that fits the frame under the heated bed on any Prusa MK3/MK3S/MK3S+. No additional hardware needed!

Tags: [box](#) [storage](#) [addon](#)

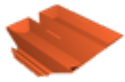

Yet another take on additional storage for the MK3 series of printers. The left box has a cut in it to help with cable management. And the lid is reinforced since most of the other lids I have found breaks easily at the tabs.

Some force required to get them to snap into the frame.

I highly suggest you print these in PETG. Looks perfect in Prusament Prusa Orange.

Please note, I'm not the original creator of these. I did however print a lot of different models and these are without a doubt the best I found. But they were never uploaded to Prusaprinters before so here you go!
