Summary

A cap for a 40mm square metal pipe to keep things out of it and protect me from it's sharp edges.

[Hobby & Makers](#) > [Mechanical Parts](#)

I needed a cap for a square metal pipe to keep things out of it and protect me from it's sharp edges. The square pipe has an outside (OD) of 40mm and the cap is just a press-fit.

Here is my 3D design. My design may match your needs, too.

My print is made in PETG 1.75mm Aurarum filament, with 0.2mm layer height and 15% infill on a PRUSA I3 MK3S printer. No brim nor supports required.

I hope you can find this design useful, too.

Remember to leave me some feedback or even a tip to keep me enthused to make more of these drawings.
