### Summary

Small case to hold a 6.35 bit driver and bit. Eject button to output bit so it doesn't poke into you while boarding.

This is a remix of [this](#) thingiverse thing. I made the bit opening a little wider to be able to fit an 8mm x 3mm neodymium magnet, because the bit was always falling out. The magnet keeps the bit in the case until eject button is pressed and bit is pulled. I used some super glue to glue the magnet to the case.

Sorry for the sh\*tty photos, I have shaky hands.
