Summary

Decorative end caps for the Lowrider 2 which allow concealed cable exit from the tubes for a cleaner appearance.

[Hobby & Makers](#) > [Tools](#)

Purely decorative end caps for the LowRider 2 MPCNC.

I have made the inner flanges perhaps a little too thin to maximise space for cables, and I did snap a few off removing them when printed in PLA. PETG gives enough flexibility for them to withstand rougher handling.

The slots in the cover pieces are also smaller than the openings in the inserts - this is a "one size fits all" approach so that they can be used as a blank cap if there is no cable, or if the cable is small. If you need a larger cable simply file or drill the hole to suit.
