Summary

A simple bracket to managed power cables on the Lowrider 2 in lieu of a drag chain.

Most people don't seem to worry about power cable management on the LowRider 2, and it's pretty clear that simple is best.

I don't like the thought of cables moving where I can trip on them or get tangled up in some of my untidyness, so I made a simple bracket and secure the cables on the underside of the table (on the opposite side) leaving a bit of a loop so they can move in a wide arc.
