This is a replacement part for the Jockey Pulley, used in Electrolux Tumble Dryers. The slide bearing has been replaced with two commonly used 608zz bearings (skateboard bearings).

Use a filament that withstand some heating as the pulley may be hot on use in the dryer.

Need to be printed with support and a least 3 perimeters.

Post processing:

- Remove support
- Optional: Clear the thin layer covering the center hole

- Optional: Light sand the track where the belt will be running to get smooth surface
- Press fit the two bearings

Shown models is printed in **Prusament PC Blend Orange** and **Devil Design PETG Super Blue**.

2024.01.06 Update: Also works with AEG Lavatherm dryers.
