My daughter always liked my 3d printed lightsabers, but unfortunately those are too big and too fragile for a 3 years old child. I decided to create a smaller, simpler but more resistant version of lightsaber.

I created this simple toy inspired by the Yoda lightsaber, but made to be durable and safe for a child. My daughter loves it!

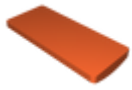

The blade is strong and I still didn't have to replace it, but in case you need it, the bottom cap is easy to open to replace the blade. It is also fun for your kid to take apart all the pieces and assemble it again.

All the parts can be printed easily at 0.2 mm layer height and using different colours to match your childrens taste.

Print 4 times the file LS_low_tabs and 1 time each other piece. The tabs and button must be glued to the main body.

May the Fun be with you!
