Bear with Heart - Low Poly

Laver

VIEW IN BROWSER

updated 13. 2. 2023 | published 13. 2. 2023

Summary

A cute low-poly bear with a removable / replaceable heart. A brim for the heart is the only required support.

The little bear who’s got some heart!

The heart is printed separately and works best in a contrasting color. It’s a very loose fit in the bear’s chest, you can leave it as is and swap the heart with the season, or add a touch of glue to make the love endure.

Print Instructions

- **Bear**
  - Print as is.
  - 15% infill is plenty, could probably go 10% and be fine.
  - Tested with 0.4 nozzle and 0.2 layer height
  - Larger nozzles may struggle with overhangs.
- **Heart**
  - Print upside down, standing on its ends.
  - Use 5 or 6mm brim to ensure it stays put.
  - Minor cleanup from removing the brim is all that’s needed.

    - Tested with 0.4 nozzle and 0.2 layer height
    - Larger nozzles may struggle with overhangs.

This is a remix of two clean low-poly designs (linked), I just cleaned up the bear and made room for a little bit of love.

- Update - Feb 13 2023
    - Fixed odd void inside the bear, thanks (**Pheggas**)
