This mod adds a standard C14/IEC AC input power socket to the skirt of a Voron V0.0 printer.

I designed it to fit in the back right corner of the printer, but I also included a mirror version, should you want to put it in the back left corner of the printer.

This part is **not compatible** with the new skirt design of the V0.1 printer.

Parts required:

- An AC input socket (eg: keyword for Aliexpress "c14 socket"). For reference, I included a picture of a compatible input socket.
- 2 M3×6 screw

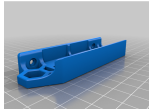

Warning: make sure you know what you are doing when wiring mains. Make sure every connection is properly insulated.

Other mods on my Voron V0:
