### Summary

Simple print to make sure your castors always send up in the same place or to keep them from rolling.

---

[Household](#) > [Other House Equipment](#)

---

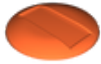

Simple print that can be used to keep castors from rolling, or can be stuck on the ground as a dock to ensure carts and other items are always parked in the same place.

I use these in the garage for several things. I just put carpet tape on the back to stick them to the floor, but any glue or other way of sticking them down would work fine. Examples are where my miter saw cart parks so it always ends up in the same place and clears the garage door sensors. I also use on the rolling bench I use for my Youtube set to make sure it always ends up in the same place on camera.

You can also print them in TPU or glue some non-skid material to the back and use them just as a way to lock castors from rolling around temporarily.

Print settings will vary depending on how much weight you are putting on them, and what material you are using.
