Summary

A way to store trivets (used for hot pots and pans) under the cabinets where they don't take up any extra space.

I used to store my cork trivets in a drawer and decided I could save some space and make them more readily accessible if they were under the cabinets. You can stack multiple holders to store more than one. If you have a different thickness you can scale the parts vertically, or add a spacer. These were designed for a trivet thickness of 10.5 mm.

I wanted it to be very minimal and out of the way.
This design was inspired by a two-piece vertical holder [1].

Future modification ideas:

1. make it longer so the trivets are held more horizontally
2. make the slot closer to the thickness of the trivet so it holds it tighter and more horizontally.
3. Make the chamfers on the front of the holder larger to make it easier to slide the trivet in without looking at the holder.
