Summary

A mask clip to attach on your belts of your ski helmet, so you dont need to take off your helmet to equip your mask

Tags: [mask](#) [clip](#) [helmet](#) [ski](#)

Please measure your belt first if it fits

16mm x 1mm

(a little more or less works fine as well. If it's thinner, then it doesn't hold perfectly, but still works)

What is this?

Due to covid you need to wear masks on ski lifts depending on where you are.

Taking out the mask, take your helmet off, equip your mask and then put on your helmet is annoying.

So thats why I designed yet another mask helmet clip, where you can attach your mask without removing your helmet.

I do wanted a minimal design and yet functional.

Printing

You need both left and right clip to print.

No supports needed. Layerheight doesn't matter (just make sure you got your overhangs right!). Recommend PETG, but any other works fine too.

Fits belts which are about 16mm wide. Does fit perfectly and secure in place if the belt is about 1mm in height.
