Summary

Greatly improved barrel connector nut that will hold tight

[Gadgets](#) > [Video Games](#)

The Sanlaki VR magnetic gun stock is one of the most popular VR gunstocks out there. The one glaring weakness that I discovered is the barrel nut that does not offer enough thread engagement and is formed to match the rest of the gun which limits how tight you make it if you care about looks. This nut solves all those issues. .2 layer height, 30% infill, supports optional for the start of threads underneath. I printed it with PETG.
