A remix of a turn counter for a card game called "Shitty" that has been passed down in the family. My Sister created the original design and I wanted to make a smaller portable version to take with us camping. I also closed off the bottom, put a screw thread on the top and created a cap.

You can store the chips in the container when not in use and use the upturned cap to hold the ones during play as they are traded in for additional cards.

See the original design for a score sheet and rules on how to play this family friendly card game.

The container does not need supports but I had a bit of trouble getting clean threads on the cap so I used supports on it. I have uploaded gcode for the the container and a cap with supports sliced for the MK3S with generic PLA.

Printed with AMZ3D PLA at .15mm and a brim because I have been having adhesion problems lately.
