Kitchen paper roll holder

Sharing my paper roll holder model. Seperated parts make for easy replacement of the paper rolls.

The thing consists of two parts on each side:

- The **“base”** that can be mounted to the wall (or wherever)
- The **“holder”** itself that slides into the base mount from the top

Roll measurements

- Min inside diameter: Ø32mm
- Max roll diameter: Ø110mm

Models available for download

Four different base models for select mounting options:

- “Clean” for double sided tape or glue
- “SingleScrew” for a single 3mm screw per base
- “DoubleScrew” for two 3mm screws per base
- “SKADIS Hooks” to hang it onto IKEA SKADIS Pegboards

Two different holders for your personal taste:

- “Short” for a 16mm long extension
- “Long” for a 26mm long extension

Printing

I printed these models on my iMK3S+ with 0.2mm Layer height in PLA and PETG.

No supports needed (Except for hook-bases).

Images attached are the short version with clean base in PLA ([Prusament Galaxy Black](#)) and the long version with single screw base in PETG ([Prusament PETG Signal White](#)).

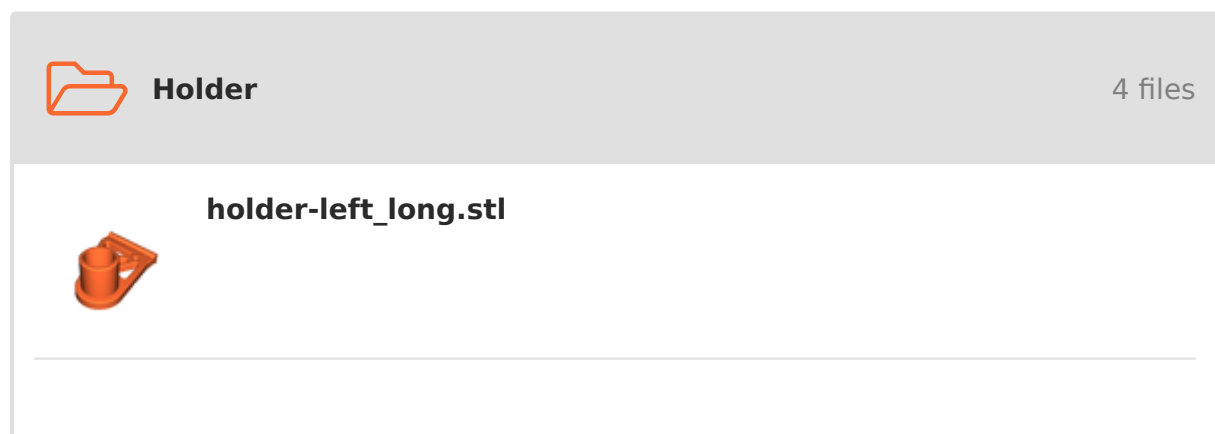

Feedback

Let me know if you have any issues with the print, or if anything needs updating. If I find the time for it, I'll try to implement it.

Also, if you like the design, let me know as well :)

Hope you enjoy the model
