### Summary

5mm higher and New designed/stronger cable holder

[3D Printers](#) > [3D Printers - Upgrades](#)

Tags: [cartesian](#) [eva](#) [ratrig](#)

I designed this cable holder for the cartesian/IDEX EVA system.

It is new designed, a bit stronger and 5mm higher then the original.

So you can mount a custom fan like my [PABST fan mod for the idex backplate of EVA](#).

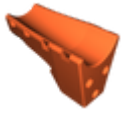

To bolt it on the backplate, use three M3x14mm screws.

Print it the flat side down in PETG, ABS, etc. 0,2mm layer height, 4 perimeters, 30% gyroid infill.

Hope you enjoy it!

Have fun!!!
