updated 16. 2. 2022 | published 11. 2. 2022

Summary

Self made substitute for the aluminium u-channel. Consists of two pieces glued together.

[3D Printers](#) > [Accessories](#)

Tags: [bar](#) [channel](#)

The picture shows the first version, the STL-file is the newer version. PETG works fine despite the heat and use ABS for best results.

This remix is based on

MMU2 LED Light Bar Prusa i3 MK2/MK3
