This is a roller for Play Dough, Play Sand, Slime, etc. It needs your own 608 bearings and 8mm rod. Then everything needs to be assembled such that it won't come apart during use.

Thank you to the original creator for making their design available. I ended up using the rough measurements and re-implementing it from scratch to capture the bearings and have rounded ends on the roller.

Only use supports for the main structure. If you leave them on the handles as well they'll likely require some drilling to clear the plastic.

08/08/19: updated the roller handle for better slicer compatibility.
