Summary

Brackets to hang LED or T5 light fixture

[Household](#) > [Other House Equipment](#)

Tags: [led](#) [t5](#) [uvc](#) [ledlightfixture](#)

Over the past couple of years I have purchased several light fixtures for varied applications. LED fixtures for closet and garage lighting, UVC fluorescent lights for sanitizing, T5 light fixtures for other incidental lighting tasks. These fixtures come with tiny metal clips and cheap screws to fasten them in place, they don't always hold very securely.

I created some brackets that snap over the ends of the fixture and can either free stand w/o tipping over or can screw in place with a couple of screws.

I developed these brackets in 2 different sizes since the fixtures come in 2 different widths. LED light fixtures are about 78mm wide and Fixtures for T5 fluorescent tubes are about 94mm wide.
