This is a super lightweight and foldable receiver mount for the Futaba R3008SB including two mounting holes for the antenna-tubes (e.g. those http://www.ebay.de/itm/like/171635211111?ul_noapp=true&chn=ps&lpid=106).

For mounting to the frame you need some double-sided tape and zip ties.

I've designed the mount for my ImmersionRC Vortex to be able to pack in my Transport box.

Print instructions

Just print it with PLA and 100% infill.
For assembling you need a M3 40mm screw and one locknut.
