I was tried to be super accurate with it (e.g. there is exactly the same amount rungs in nozzle with same space between them). I used videos of sign prop, photos i found over internet and free [AprilStorm](#) design. Side and barrel adjusters can be rotated after glue and assembly.

Uploaded half of model (except body) you just need to mirror it.

Printed on Geetech A10

Res: 0.1

Infill: 0.2 for big parts and 0.8 for small (and Grip pattern).
