I have been developing FPV stuff for long years now and I have been into naked GoPros and CineWhoops and I also surf the #microlongrange wave. So I have some naked GoPros and wanted to create a usable and safe screen holder for it. It fits the GoPro Hero 5, GoPro Hero 6 and GoPro Hero 7 screens. It can be opened and closed, so it exposes the flex cable and connectors, see photos.

If you have a good GoPro board with good backlight circuits, you don't have to use the added balance lead for backlight. However I had one board that couldn't give backlight so I made a connector inside the box that you can connect the balance lead of a 3s LiPo to drive the backlight.

See photos of my modification and if you have any questions feel free to ask me. If you need the source file for modification I included it.

## Feedback is important!

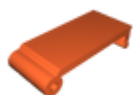

I spend countless hours perfecting and testing my designs and I would love to hear your feedback too. If you like my designs I appreciate a like or a comment. Please post a photo if you print this.

## Donations

I am open to any kind of donation if you want to support me :)
