My sister wanted a ring with cat ears. This is the second iteration with slightly smaller ears so you don't snag on everything while wearing it. The parts/Files are for a ring with 20mm inner diameter (22mm OD, 5mm thick), you can scale them to fit. The Solidworks files contain rounded edges, the edges of the printed parts, especially the inside of the ring, needed to be deburred/rounded manually though. I just used black PLA with 0.1mm layer height, print time is still very short. It might profit of a smaller nozzle.

Notice: the Solidworks files were generated with a students version, so please be careful! Don't open them with a commercial licence, otherwise you will have the "student"-watermark all over you files.
