A friend wanted a Navi ornament so Xenyo's Navi and Ark19's led holder <https://www.thingiverse.com/thing:78821> via Nevil's remix <https://www.thingiverse.com/thing:89639> merged to become Voltron! this well received, smaller decoration.

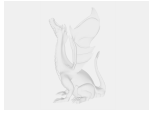

Minimal infill and outer layers let the leds really shine through.

I also included pre-mirrored wings for those unfamiliar with netfabb or blender or whatever.

Edit: AgentPothhead pointed out that wings were mis-scaled. I scaled the body to make the battery holder fit but forgot to do that for the uploaded wings. They've been rescaled and re-uploaded. Still a tight fit from what I recall. Obviously this may vary per printer but you might still try the wings at 98% of their new size to insure easy installation.
