I didn't happen to have a prototyping shield board so I put together my project on a perma proto board I had lying around and made this case. Everything snaps together. Optional button lines up with a pushbutton mounted on the proto board.

The pins the uno snaps into are pretty fragile due to their size... probably won't withstand removing and re-adding the board. Don't fear if the tops break off you can just drill a little hole in the remaining post and use a short screw.

Case has built in strain relief for cables included.
