[3D Printers](#) > [3D Printers - Upgrades](#)

All the acrylic parts seem to get brittle and break over time. Attached is a scale drawing of the Z plate the lead screw bushings are mounted on. Just print the PDF (make sure to set scale to 100%) then cut out, stick to some 3mm sheet aluminum with spray adhesive, and drill/cut to size. I'd recommend using a center punch to drill the holes perfectly and a jigsaw with a metal blade. Corners can be sanded with a belt sander.

Also included is an .stl which I would not recommend printing. If you insist, maybe try PC or carbon fiber filament. You could also thicken it up if you have longer bolts.
