This replaces the original white foam inserts used on this classic Sears Craftsman 1/4-inch drive socket set.

Included are the main base tray insert that primarily holds the tools, and the top insert which keeps the tools in place when the case is closed. This tray includes room for 2 additional sockets (9/16" and 5/8" shallow) that were not in the original tool set.

If the tray length is longer than what your printer can print at one time, you will need to cut the tray in half in the slicer, and print it in two pieces and glue them together.

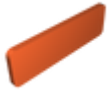

Also included are the Fusion 360 and STEP files so that you can modify it as you see fit.
