Spacer to move IKEA RATIONELL cupboard door damper slightly further from the side of the cupboard.

The plunger of the damper was landing on the inside face of the door right where there is a bump as it changes thickness, resulting in a big sideways force on the plunger and a squeaking noise as it closed. This shim moves the damper 3mm further from the side, moving the point where the plunger lands on to a flat part of the door. May be useful if you are experiencing a similar problem.
